

Free breast/chest
screening in a safe and
inclusive environment

Free breast/chest
screening in a safe and
inclusive environment

Do you need a breast/chest screen?

Breast cancer develops in 1 in 7 people that were assigned female at birth. People that were assigned male at birth have a lower risk, but their risk increases when they are on Hormone Replacement Therapy (HRT) for 5 years or more. Breast/chest screens can find cancers that are too small to feel. The sooner cancer is found, the more successful treatment is likely to be. A free, 10-minute breast/chest screen can detect cancer when it's still too small to feel, even by a doctor.

Are you aged 50 to 74 with no breast symptoms?

We recommend a breast/chest screen for:

- Cis women
- Trans women that have been on HRT for 5+ years
- Trans men that have not had top surgery
- Non-binary people that were assigned female at birth and have not had top surgery or assigned male at birth with 5+ years of HRT

Rainbow Sessions

All of our clinics strive to provide a safe and inclusive service and we run dedicated sessions throughout the year for LGBTIQ+ people who might need extra support, prefer to screen with other community members, or would like extra time to ask questions and talk to our radiographers. We call these Rainbow Sessions. More information about Rainbow Sessions can be found on breastscreen.org.au/rainbow.

Our program:

Is free

Takes about
10 minutes

Is with a woman
radiographer

Does not require a
doctor's referral

Is available across
Victoria

How to book?

Call **13 20 50** or visit **breastscreen.org.au/rainbow** to book. You can also send an email to **communityengagement@breastscreen.org.au**.

Rainbow Tick

Since March 2019, we have been **Rainbow Tick accredited**.

This drives our ongoing improvement to build lasting LGBTIQ+ inclusion.
